Conducing the literature search for your MA

- We're going to work on this in groups today

- Before you conduct your search make sure your <u>search protocol</u> and <u>criteria</u> tabs are filled in

- Use today to actually do the search and divide up the work of entering papers among group members

- And then, get started on entering the papers

A few notes of entering papers

- Just look at title and abstract
- This is just a first "screening" pass, we'll look more closely at the papers later on
- Be inclusive in your coding – if you're not sure, error on the side of including it
- Only include papers with experimental data
- Some clues that a paper is experimental:
  - "We found"
  - "Experiment"
  - Reporting number of participants "(N = xxx)"

Groups

- <u>Minimal Group Paradigm (Group 1):</u> Jailyn, Sarah, Nicole H, V, Shruti, and Joyce
- <u>Linda Problem (Group 2):</u> Leo, Nicole C., Zoe, Fu, and Themi
- <u>Syntactic Bootstrapping (Group 4):</u> Anjie, Izzy, Alana, Maya
